

**Elm Village, Camden-
Statement of Ground Remediation Measures.
December 2009**

wynne-williams associates ltd

The following information is to be read in conjunction with the Ground Engineering Soil Report- Ref: cl 17779 November.

North Canal Site:

In the existing planting beds to be used for growing vegetables 600mm of existing topsoil will be removed and replaced with new imported topsoil to BS 3882.

South Canal Site:

As there isn't any contamination present in the tested soil, no remediation measures are proposed within this site.

Large Triangle Site:

Although contamination has been highlighted within this site there are going to be no remediation measures. This is due to a large number of mature trees and shrubs that mean it is not possible to grow vegetables for human consumption.
