

Project 4862/DA

Design and Access Statement

**Planning Application for Roof Mounted Chiller Plant and Acoustic Screen
Institute of Neurology, 23 Queen Square, London WC1N 3BG**

Design Proposals

A new roof mounted Chiller Plant unit is proposed for 23 Queen Square to increase the cooling capacity for the building and improve internal environmental conditions to the south facing offices and Library Archives on the First Floor of the building. The chillers will be acoustically screened with a new acoustic screen wall as shown on the application plan (drawing number L(00)04). A background noise survey and plant assessment has been prepared by the Environmental Equipment Corporation (consultants) and a copy of this is included with the Application.

Access Statement

The Application proposals are for the provision of mechanical plant only and are fully accessible from the existing roof access provision. The proposals have no impact on the existing access arrangements for the building.
