

**Property Address**

264a Belsize Road, NW6 4BT

21 May 2009

Reference: 05.57

Dear Sergio,

Following our recent visit to the above property, I am submitting the estimation for Secondary glazing supplied and installed:

**Comprising of:**

12 window(s): Framed hinge unit(s).

- These units will be top hinged & will cover angled windows.

4 window(s): Fixed unit(s).

- These large fixed units will cover the middle RECTANGULAR skylight. They will be suspended overhead & will be fixed to timber batons placed across the window.

**Price: £ 8 350 (excluding VAT)**

**We estimate that there could possibly be a 60-75% reduction in noise being emitted from the property.**

**Please note:** We are also able to completely cover the right hand wall with acoustic tiles. This **HAS NOT** Been included in the quote above, as the price of the tiles is not available at this moment.

- All glass will be 6.4mm Stadip Silence (See further specs below). This is an acoustic glass (high specification that can fit our low profile aluminium system).
- 35mm Low Profile Section.
- All aluminium sections will be powder coated standard white.
- Installation can take place within 2-3 weeks from date of order.
- Deposit of 50% is payable on confirmation of order.
- Balance of payment to be paid on day of installation. (ONLY cheques & bank transfers accepted).
- All work carries a 10-year guarantee on workmanship and materials (stated on face of invoice).

Our unique low-profile secondary glazing system has been designed to be very much in keeping with period windows.

City Sound has worked solely with secondary glazing for soundproofing and thermal insulation in mostly listed buildings since 1968.

Yours Sincerely,  
Sanette Gowar

**Specification: 6.4mm STADIP SILENCE (Saint Gobain)**  
**Acoustic PVB laminated safety glass**

#### **Definition**

*SGG STADIP SILENCE is a special acoustic laminated glass.*

*This innovative glass, which is exclusive to SGG, provides top quality acoustic insulation.*

*Its mechanical and safety characteristics, which are comparable to those of SGG STADIP, mean that it can also be used in overhead glazing and large picture windows to provide varying levels of protection for property and persons.*

#### **Product Description**

*SGG STADIP SILENCE is an acoustic laminated safety glass, consisting of two or more sheets of glass bonded together by one or more acoustic PVB\* interlayers known specifically as PVB Silence. This produces a glass with significantly enhanced acoustic attenuation performance.*
