Adjoining Occupiers:		No. notified	00	No. of responses	01	No. of objections	01
				No. electronic	01		
Summary of consultation responses:		A site notice was erected on 28/04/2009, expiring on 19/05/2009. A total of one objection was received from an interested party. The basis of this objection is the design of the proposed kiosk. More specifically, this kiosk is identical to one which has already been registered with the Intellectual Property Office under Reg No 4004225; the applicant therefore does not have permission to use this design. This objector also raised comments as to whether the applicant has funds for liabilities in place with Ofcom for their existing and proposed kiosks.					
CAAC/Local groups* comments: <small>*Please Specify</small>		None.					
Site Description							
The application site comprises part of the public pavement outside The British Library on the north-west side of Euston Road. More specifically, it is located in the area between the east and west entrances to The British Library from Euston Road (between Midland Road to the north-east and Ossulston Street to the south-west).							
It is also noted, following a site visit undertaken on 27/04/2009, that three existing telephone kiosks are located on the further to the south-west along the north side of Euston Road, 85m from the application site.							
The application site is not located in a conservation area. Euston Road is however a TfL Red Route.							

Relevant History

There are approximately 13 similar applications for telephone kiosks of an identical nature in various locations (predominantly in the south of the Borough).

Assessment

Introduction

GPDO prior approval is sought for the installation of a telephone kiosk on the public pavement outside The British Library, which is located on the north-west side of Euston Road between Midland Road and Ossulston Street.

Part 24 of The Town and Country Planning (General Permitted Development) (Amendment) (England) Order 2001 permits the Council to only consider matters of siting and appearance in determining GPDO prior approval applications.

The design of the proposed telephone kiosk itself, is a simple, lightweight structure which includes clear polycarbonate (transparent) glass on the side and rear (facing the highway) elevations, supported by metal frames. It will be approximately 1.21m in length and width (although the south-west side elevation is a narrower 0.9m in width) and 2.46m in height. The north-west elevation entry point will be of open design.

In terms of visual clutter, the proposed kiosk is located in close proximity to a series of variety of existing features located on this footway. In close proximity to the application site are two lampposts, two trees and a road sign connected to a further post denoting a new road layout ahead. Also close-by is a bus stop and associated bus shelter (to the north-east of the application site). As such, it is considered that the proposed telephone kiosk would add to the existing clutter on the street and would therefore fail to preserve the character and appearance of the streetscene, contrary to policies B1, B5, and T12 of the Replacement Unitary Development Plan 2006.

Policy T3 states that the Council will only grant planning permission for development that it considers to make satisfactory provisions for pedestrians and cyclists. In assessing development, traffic and highways alterations, Policy T3 requires consideration of improvement to conditions for convenience and safety of pedestrians and cyclists, the walking and cycling environment, including design, access and security. The footway in this location is fairly wide; however it does experience high pedestrian flows given that it is located between Euston and King's Cross St Pancras stations. In addition, there is a range of existing clutter on the footway (as detailed above). Subsequently it is considered that the proposed structure would in overall terms reduce the amount of available footway for pedestrians and lead to additional street clutter on the highway. Therefore the proposed kiosk has a detrimental impact on the pedestrian environment, contrary to Policy T3.

With regards to community safety matters, a number of issues have been raised by the Metropolitan Police Crime Prevention Design Adviser. In particular it has been noted that "telephone kiosks have been a real problem in Camden for many years and we have worked long and hard to get rid of many of them off the streets". Issues raised are the potential for drug taking, criminal damage, advertising sex workers and being used as a toilet. Furthermore, it is noted that "the additional clutter on the

footway can also create problems in terms of street crime and robbery in particular". Further, the Council's Projects team have added similar concerns and also noted that there have been a number of kiosks removed from the local area in an attempt to overcome these issues. As such, it is considered that the proposed kiosk, owing to design and the open location, would compromise the safety of those using and servicing the telephone kiosk and encourage criminal activity. The proposed kiosk is therefore contrary to policy SD1d and T3.

Policy SD1c of the UDP notes that all new development is expected to meet the highest standards of access and inclusion. The proposed telephone box has been designed with a flat entry and with a 1.21 metre wide open front to allow access for wheelchair users. The proposal is therefore consistent with policy SD1c.

Recommendation: Prior approval required – approval refused
