## **Site Description**

The application site is located on the east side of Southampton Row in close proximity to the junction with Bloomsbury Place that lies to the south and comprises part of the public pavement outside Ormonde Mansions, 106A Southampton Row. Ormonde Mansions comprises a five storey building that is occupied by variety of commercial units on the ground floor with residential flats above. The Bloomsbury Conservation Area bounds the site to the east and west.

## **Relevant History**

There are approximately 12 similar applications for telephone kiosks in various locations that are mainly within the south of the Borough.

## **Relevant policies**

## Assessment

### Introduction

GPDO prior approval is sought for the installation of a telephone kiosk on the public pavement outside Ormonde Mansions, 106A Southampton Row that is in close proximity to the junction with Bloomsbury Place to the south.

Part 24 of The Town and Country Planning (General Permitted Development) (Amendment) (England) Order 2001 permits the Council to only consider matters of siting and appearance in determining GPDO prior approval applications.

The design of the proposed telephone kiosk itself, is a simple, lightweight structure which includes clear polycarbonate (transparent) glass on the side and rear (facing the highway) elevations, supported by metal frames. It will be approximately 1.21m in length and width (although the south side elevation is a narrower 0.9m in width) and 2.46m in height. The east elevation entry point will be of open design.

In terms of visual clutter, the proposed structure is in close proximity to two existing telephone kiosks, light posts located immediately adjacent to the proposed structure and outside seating areas relating to the coffee shops occupying the commercial units on the ground floor. It is considered that the proposed telephone kiosk would add to the existing clutter on the street and would therefore fail to preserve the character and appearance of the streetscene contrary to policies B1, B5, and T12 of the Replacement Unitary Development Plan 2006.

Policy T3 states that the Council will only grant planning permission for development that it considers to make satisfactory provisions for pedestrians and cyclists. In assessing development, traffic and highways alterations, Policy T3 requires consideration of improvement to conditions for convenience and safety of pedestrians and cyclists, the walking and cycling environment, including design, access and security. The footway in this location is fairly wide; however it does experience high pedestrian flows at times. The pavement itself is relatively uncluttered at this location which improves the amenity for pedestrians. It is considered that the proposed structure as discussed above would reduce the amount of available footway for pedestrians and lead to additional street clutter on the highway and would therefore have a detrimental impact on the pedestrian environment contrary to Policy T3.

With regards to community safety matters, a number of issues have been raised by the Metropolitan Police Crime Prevention Design Adviser. In particular it has been noted that "telephone kiosks have been a real problem in Camden for many years and we have worked long and hard to get rid of many of them off the streets". Issues raised are the potential for drug taking, criminal damage, advertising sex workers and being used as a toilet. Furthermore, it is noted that "the additional clutter on the footway can also create problems in terms of street crime and robbery in particular". Further, the Council's Projects team have added similar concerns. As such, it is considered that the proposed kiosk, owing to design and the open location, would compromise the safety of those using and servicing the telephone kiosk and promote criminal activity. The proposed kiosk is therefore contrary to policy SD1d and T3.

Policy SD1c of the UDP notes that all new development is expected to meet the highest standards of access and inclusion. The proposed telephone box has been designed with a flat entry and with a 1.21 metre wide open front to allow access for wheelchair users. The proposal is therefore consistent with policy SD1c.

### Recommendation:

Prior approval required – approval refused
