Dear Connie,

**Re: St Augustine's Road – Environmental Noise**

We provide comment in relation to the design amendments proposed for the St. Augustine's Rd residential development and their implications with respect to environmental noise considerations.

We have liaised with the project architect who has advised us that the design modifications to the scheme do not involve any significant change in the building foot-print, percentage glazed areas to the facades, overall external fabric build, service arrangements, or configurations with respect to balcony access.

Accordingly, we confirm that the environmental noise assessment set out in the Hoare Lea Acoustics report dated 29/04/08 (reference CC-1002912) remains valid for the current design revision.

We trust the above is satisfactory for your immediate purposes. Please do not hesitate to contact us if you have any questions or wish to discuss.

Yours sincerely  
**For and on behalf of Hoare Lea Acoustics**
