

THE ADVANCED SYSTEM

The Advanced System was developed for the new house-build market and the more rigid building regulations and NHBC requirements that apply to new properties. The following styles are available for both fixed and opening casements.

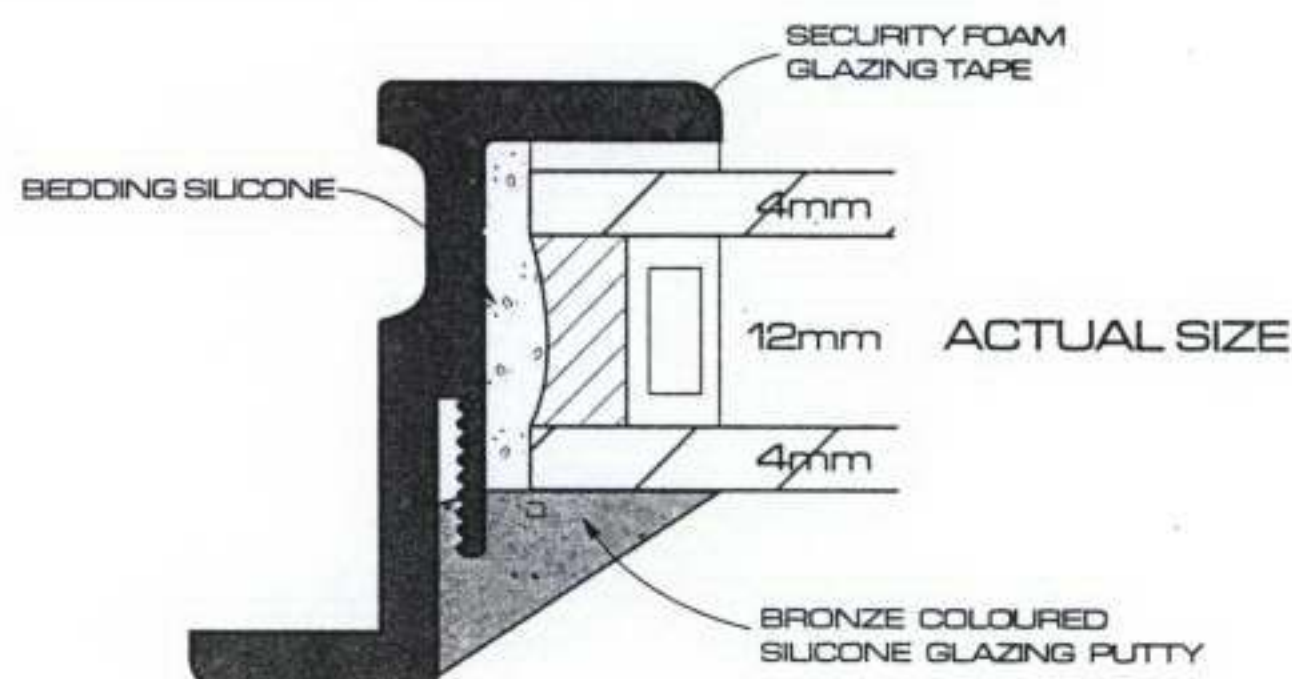

The Advanced System can also be finished with an attractive bronze beading which is pre-slotted to conform to NHBC requirements.

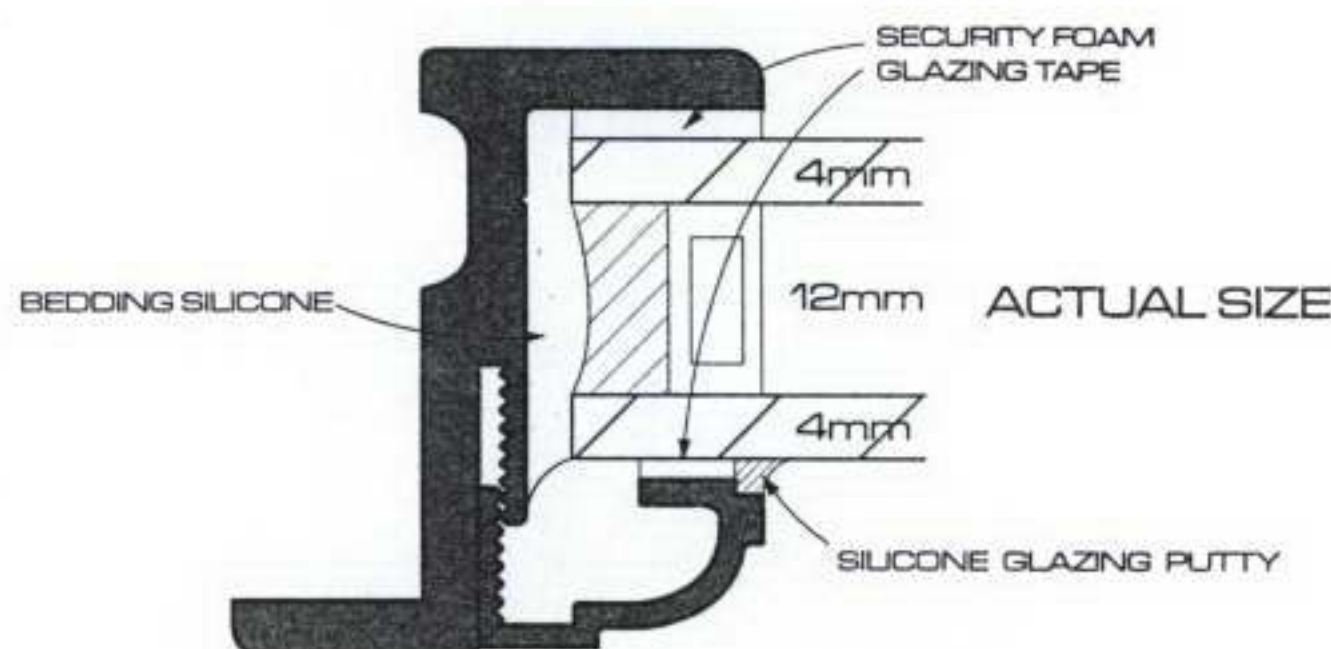

GLAZING FOR ADVANCED

The advanced system is designed principally for double glazing. Units ranging between 14mm and 20mm can be fitted using either float, toughened or laminated glass with a variety of cavity sizes. Low emissivity glass and gas filled cavities can be used for optimum efficiency.

The casements are pre-fitted with weather seals and also security foam glazing tape which secures the glass in position.

The glass can either be finally sealed in with a bronze coloured silicone or glazing putty.

Alternatively a decorative bronze beading can be supplied as an optional extra with the Advanced System. This is pre-mitred in manufacture to allow for easy installation on site.

PERFORMANCE

- ALL TESTS HAVE BEEN CARRIED OUT ON OPENING WINDOWS MEASURING 1500mm X 650mm.

BS 6375 Part 1

Exposure categories measured in pascals

Wind	Water	Air
2000 PA	300 PA	600 PA
