Dear Mr Durling

3037

Reference: 59 Maresfield Gardens - 2006/2820/INVALID/IN

Thank you for your letter from 4.7.2006 asking regarding the trees.

I have shown the tree positions in the garden there are three trees, two at the rear and one at the front of the house. The proposed protection of the trees to the rear will be to erect a fence from boundary to boundary 3m from the trees. Works will be carried out on only one side, the east side of the two garden trees which allows us to come to closer proximity as stated in the NHBC standard Appendix 4.2F if agreed. The front tree we should tie some covering to, to protect the trunk, the crown of the front tree is high.

The tree names are:

Front tree: Maple – Acer (Latin name) – c8m high – Diameter 59cm

Rear, north side: - Maple – Acer – c10m high – Diameter 68cm

Rear, south side – Malus (Crab Apple) – c4m high – Diameter 48cm

On the drawings you can see the line of the protection where it is actually 4m away as requested by Kevin Fisher who works in Camden in landscaping.

Yours sincerely

Alexander Sebba
