**Re: 36 - 40 Maple Street, London W1T 6HE – application ref 2006/4011**

Further to our earlier telephone conversation we would like to formally remove and re-submit under a separate application the works to locate replacement air conditioning plant to the rear elevation of the above property in order to not delay the other proposals described in the application. We will be sending in a more detailed acoustic report for the air-conditioning plant in due course.

As per our conversation we now await your approval for proposals including replacing the shop fronts, making new enlarged door & window openings to the rear elevation, and providing infill pavement lights to extend the basement area to the front. As per your comments that the works do not appear to represent significant visual impact to the building we hope that we can look forward to a swift and positive outcome of our application following the 21 day consultation period starting today.

Please do not hesitate to contact me if you need further clarification of details, materials or any other information & revisions in order to approve the application as soon as possible.

Yours sincerely
