## Steps 3 - 2 - 1

3 embossed tactile self-adhesive labels fitted to the wall or handrail counting down the last three steps of a flight of stairs

Such a simple measure, but on that is a practical aid to a visually impaired person on potentially dangerous stairs. The labels are made from clear polycarbonate in order to blend into the colour scheme of the handrails and have a strong exterior grade 3M adhesive to the rear for maximum adhesive hold.

The thin line in the centre of the labels is the part that is embossed and the number of line indicate how many steps are remaining

The labels should be placed on the handrail, aligned centrally with the steps as shown here
