

# Appendix 7.7 Non-native Crayfish Trapping Results for Surveys Undertaken on the Hampstead and Highgate Pond Chains in 2013

Pond Name	Survey Date	Species and Number Recorded		Comment
		Red swamp crayfish ( <i>Procambarus clarkia</i> )	Turkish crayfish ( <i>Astacus leptodacyylus</i> )	
Hampstead Chain of Ponds				
Vale of Health Pond	05/06/2013	0	0	Non-native crayfish absent in historical survey records.
Viaduct Pond	26/06/2013	0	0	Although not recorded in this survey a couple of red swamp crayfish have been observed here in previous years including when the pond was part emptied in 2011.
Mixed Bathing Pond	19/06/2013	0	2	Previously contained red swamp crayfish pre. 2000. In recent years very few crayfish have been observed in the pond.
Hampstead No.2 Pond	31/08/2013	0	35	100+ Turkish crayfish have been observed seen at the fringes of this pond during evening amphibian monitoring. Environment Agency monitoring in 2008 revealed no crayfish.
Highgate Chain of Ponds				
Stock Pond	14/08/2013	0	0	Non-native crayfish absent in historical survey records.
Kenwood Ladies’ Bathing Pond	09/08/2013	6	0	Red swamp crayfish are often obvious during evening amphibian surveys.
Bird Sanctuary Pond	08/08/2013	14	0	Pond has been monitored for a number of years since 2008.
Model Boating Pond	24/05/2013	28	0	Largest population of red swamp crayfish is believed to be present in this pond. Seventy-six removed during 2013 fish survey.
Highgate Men's Bathing Pond	07/08/2013	15	0	Lots of red swamp obvious here. Has been trapped for a number of years.
Highgate No.1 Pond	12/06/2013	2	0	Very few have been seen previously during evening amphibian torching.
Stock Pond	14/08/2013	0	0	Non-native crayfish absent in historical survey records.
Notes: * Numbers recorded are totals for each species recorded from the deployment of 10 traps; **Comments provided as personal communications with Adrian Brooker (City of London Ecologist).
