2014/2735/P	Garrad Wayling	Flat 18 5-15 Newton Street London	15/05/2014 07:30:03	OBJ	I object to the placement of the plant room at the closest point to neighbouring residences. This will generate additional noise from the building in what is otherwise a relatively noise-free area during evenings when people are trying to sleep. Such a noise-producing site should be placed in an area which is further from neighbouring residential premises preventing any inconvenience and instead placed either on the interior of the building or generally at any of the points in the building (and there are many) where residences are not nearby. Allowing this development will cause constant noise pollution complaints from local residents and will generate future problems in the neighbourhood. Residents in the area have a right to quiet enjoyment of their homes and this will affect that right.
