

EXTERNAL SPACE _ GARDEN DESIGN

Garden_

- The aim here is to retain as much level lawn area as possible.
- We have incorporate a lower level patio, BBQ area adjacent to the dining room.
- Raised borders break up the change in level from patio to lawn and create visual interest when viewing from the rear extension.
- The outbuilding to the rear of the garden will be reconfigured to become a focal point of the garden providing a possible games room / studio etc.
We have also added additional storage to its side. The outbuilding garden facing facade will be re-addressed.
- The relationship between the house and garden is such that the garden can be seen from all the spaces to the rear of the house for surveillance. Surveillance can also be gained from the first floor terrace.
- At night the garden will become a stunning backdrop to the glazed dining area, with beautiful lighting to enhance it features.
