

Dear Barry,

Thank you for your email. Please see attached site plan from an earlier visit I made.

Tree 1 Beech is 3 on the plan

Tree 2 Two Limes are 4 & 5 on the plan

Tree 3 Ash is 7 on the plan

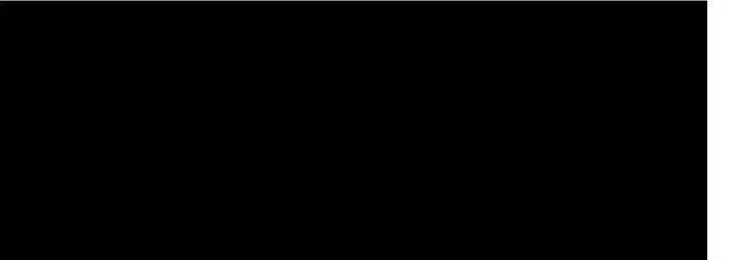

Tree 4 The small and dead Ceanothus is not a tree and so is exempt.

I trust that this answers your query.

Please could you revert as soon as you can on this. We need an indication of the Council's intent on the Beech tree the other work is really quite routine.

Thank you

Dick Tomlinson

the 1990s, the number of people with diabetes has increased in all industrialized countries.

Diabetes is a chronic disease, and the consequences of the disease are often severe. In the Netherlands, the prevalence of diabetes is 6.5% (1.5% of the population with type 1 diabetes and 5% with type 2 diabetes). The prevalence of diabetes is expected to increase to 10% by the year 2010. The prevalence of diabetes is expected to increase to 15% by the year 2020. The prevalence of diabetes is expected to increase to 20% by the year 2030.

The prevalence of diabetes is expected to increase to 25% by the year 2040.

The prevalence of diabetes is expected to increase to 30% by the year 2050.

The prevalence of diabetes is expected to increase to 35% by the year 2060.

The prevalence of diabetes is expected to increase to 40% by the year 2070.

The prevalence of diabetes is expected to increase to 45% by the year 2080.

The prevalence of diabetes is expected to increase to 50% by the year 2090.

The prevalence of diabetes is expected to increase to 55% by the year 2100.

The prevalence of diabetes is expected to increase to 60% by the year 2110.

The prevalence of diabetes is expected to increase to 65% by the year 2120.

The prevalence of diabetes is expected to increase to 70% by the year 2130.

The prevalence of diabetes is expected to increase to 75% by the year 2140.

The prevalence of diabetes is expected to increase to 80% by the year 2150.

The prevalence of diabetes is expected to increase to 85% by the year 2160.

The prevalence of diabetes is expected to increase to 90% by the year 2170.

The prevalence of diabetes is expected to increase to 95% by the year 2180.

The prevalence of diabetes is expected to increase to 100% by the year 2190.

The prevalence of diabetes is expected to increase to 105% by the year 2200.

The prevalence of diabetes is expected to increase to 110% by the year 2210.

The prevalence of diabetes is expected to increase to 115% by the year 2220.

The prevalence of diabetes is expected to increase to 120% by the year 2230.

The prevalence of diabetes is expected to increase to 125% by the year 2240.

The prevalence of diabetes is expected to increase to 130% by the year 2250.
