Your comments

As ARUP stated in its report of 14/06/2012 (para. 6.2.4), all water level monitoring data coincided with a very dry period giving rise to generally low groundwater levels.

This has not been taken account of by Camden, nor by Carol Geotechnics Ltd.; nor has data since been taken during a period of more normal rainfall (let alone the more extreme weather conditions becoming increasingly likely).

Failure fully to take ~~into~~ account of this factor would be for Camden to ignore a relevant consideration in reaching its decision.

In addition, the applicant has put forward no new measures to mitigate the significant traffic & pedestrian blockages in Pilgrims' Lane during the works.

DP 27 has not been met.

Please continue on extra sheets if you wish
