

CONSTRUCTION METHOD STATEMENT - PLA161 PL16

6 Edis Street, London NW1 8LG

A fully secure hording will be installed at the outset of the works at the front of the property to insure that the street and pavement are kept clean and presentable.

Parking bays will be suspended for waste management and site facilities will be located at the rear of the property.

The quantities of materials for the extension are relatively small and all components have been designed to allow them to be carried by manpower, from delivery, through the property, therefore there will be no need for lifting large elements with cranes etc

Materials will be stored on site and within the boundary of our property.

All works are to take place within the agreed working hours of Camden policies.

This statement should be read in conjunction with other supporting documents submitting in connection with the planning application:

- Architectural drawings
- CIL Form
- Photographs
