We are the tenants of Flat 17, on the 4th floor and are very concerned by the scale of the work that will be undertaken right above us.

The level of noise and the duration of such large work are likely to be make living right below extremely difficult.

Will scaffolding be put up against our flat wall/windows?

How many months is the work expected to take?

Would the work take place also during early hours, evenings and weekends?

What will be the impact on the communal garden, staircase and lift during the building work?

Regards,
Aline
