

Specialist Fabrications

Specialist Fabrications.

Not only can Mansfield Pollard produce highly engineered air handling equipment but utilising their highly skilled workforce and combining this with years of knowledge in the sheet metal industry we can create a vast range of architecturally attractive specialist fabrications.

We have engaged with a range of clients to provide many types of innovate products. From spiral staircases to entrance gates and from dustbins to letterboxes.

In a day when everything is computerised we have retained the skills of the traditional time served craftsman who can perform intricate pattern developments by hand giving that unique, bespoke hand crafted touch.

Our clients include Urban Splash a forward thinking property developer for whom we provided all their architectural steelwork requirements for their Lister Mills redevelopment in Bradford. Part of this was the fabrication of large sliding entry gates with electronic security for resident parking and large Car park

ventilators designed by the architect and realised by our skilled engineers. Over the car park stair wells we created steelwork portal frames precision engineered to accept preformed glass panels. Throughout the whole construction it was imperative that these frames were completely square and free from flex to prevent the glass from breaking.

Illustrations above show all the elements in one impressive panoramic shot.
