Hi Katrine,

I have been in touch with our window company and here are the drawings they have sent over.

The frames will be Aluminium.

The glass will be a standard double glazed unit, with opaque glass for privacy for all.

There will be an argon warm edge spacer bar between the two sheets of glass.

The outside glass will have a soft coat on it and the inside will be a low iron piece of glass.

These windows will have the ability to pivot slightly window to allow air into the rooms to aid ventilation.

The window height is 13cm more than originally planned. This is because we were advised that this slight increase would give the window a height/length ratio closer to 1:2 which would significantly improve the aesthetic. It would also make it in proportion to the existing

upstairs window whilst bringing the bottom of the window in line with the current line of the bricks. We want to do this as sympathetically as possible and are trying to improve the look of the property as currently it has a rather unappealing look with mismatched windows and an unsightly door - we hope that by taking into account the proportion of the existing window and the spaces between the london bricks the house is made from we will be able to improve the aesthetics of this house and there for add to the aesthetics of the street (which many of our neighbours have commented on that they think this would be a vast improvement!)

The frames will be in black to match with the colour of the exterior that already exists.

I hope this is sufficient information, as you know I am ever so keen to get the planning certificate as soon as is possible as I am up against quite a tight time scale now to complete the works. If you require further information please do not hesitate to contact me on 07939573644 or at this email address,

Many thanks

Emma
