

Hi Richard

I do apologise I thought I had actually sent this so many apologies

The product attached is probably best suited for the job.

It is integrated so the only requirement will be a power cable from the building.

It is vandal proof and easily fitted and doesn't need any holes other than drill holes for mounting so the integral structure of the building won't need to be affected

The dimensions are

519mm x 1070mm x 228mm (W X H X D) weight 50 kg

Once again I apologise for the delay

Justin
