Re: Camden BSF: Planning Condition 22

With regard to the Planning Condition 22 *"Written verification of the achieved u-values and air permeability rates and a statement of evidence of an energy efficient lighting strategy shall be submitted to the local planning authority prior to occupation of the of the development."*

Buro Happold recommends that BAM provides the as-constructed U-values, air permeability tests and details of the as-installed energy efficient lighting design to the planners to discharge this item.

We understand that these are all installed as per the original design submitted as part of the energy strategy for planning, and urge the planners to accept this information to discharge this condition.

We suggest that this letter be appended to your information and issued direct to the planners.

Yours sincerely
on behalf of Buro Happold Limited

Angus Palmer
Director
