Re: Camden BSF: Planning Condition 24

With regard to the Planning Condition 24 *"Prior to commencement of relevant works, details relating to the renewable energy technologies to be installed shall be submitted to the local planning authority and the relevant part of the development shall thenceforth not be occupied without the installation of such technologies. A meter shall at all times be installed to monitor the energy output of the technologies.*"*

Buro Happold recommends that BAM provides the as-constructed details of the renewable energy technologies, namely the PV and GSHP, and their respective metering methods, to the planners.

We understand that these are all installed as per the original design submitted as part of the energy strategy for planning, and urge the planners to accept this information to discharge this condition.

We suggest that this letter be appended to your information and issued direct to the planners.

Yours sincerely
on behalf of Buro Happold Limited

Angus Palmer
Director

A large, stylized handwritten signature in black ink, which appears to be 'Angus Palmer'. The signature is fluid and cursive, with a prominent loop at the end.
