www.privettint.co.uk

VLOCK is a unique 3 point locking system
One lock secures the cycle frame and wheels

Guide the cycle into the channel

Click the top lever through the front wheel

Click the bottom lever through the rear wheel

Lock the main frame clamp in position

- Space saving design
- Design registered- 4018864, 4018863, 4018862
- Stainless steel outer case
- Channel measures 1480mm high x 175mm wide
- Components are hardened
- Parts touching the bike are soft coated
- One hardened padlock

The **VLOCK** works by holding the bicycle wheels with soft coated hardened levers which are secured when the main frame clamp is lowered into position. One hardened padlock secures the cycle in the channel preventing the wheels and frame from being removed.

Place your company name on the sides of the VLOCK
