Dear Mr McDonald,

**Re: 102 Camley Street London NW1 0PF**  
**Application Ref: 2014/4381/P**

I would like to register my **support** for the above planning application in relation to the redevelopment of 102 Camley Street.

The application would see the demolition of the existing vacant warehouse building, to provide a mixed use redevelopment ranging from 8-12 storeys comprising 1,620sqm employment floorspace, 154 new homes, a new public ramp and separate step access to the Regents Canal towpath and high quality landscaping.

I support the proposals for the following reasons:

- The plans will regenerate the local area and provide jobs for local people.
- The employment space is focused on local start-ups and small businesses.
- The new housing, including on site affordable housing is much needed in this area.
- The new public ramp and step access to the Regents Canal towpath will be welcomed, as will the plans for improving public open space and linking this with the streetscape improvements currently being undertaken at 103 Camley Street.
- The development will contain a number of sustainable elements including photovoltaics, ground source heat pumps, combined heat and power, future proof connections for any future District Heating system, recycled rainwater, new trees and planting. In addition large areas of the site will be publically accessible.

Name Michael Rahman

**Application Ref: 2014/4381/P**

I would like to register my **support** for the above planning application in relation to the redevelopment of 102 Camley Street.

The application would see the demolition of the existing vacant warehouse building, to provide a mixed use redevelopment ranging from 8-12 storeys comprising 1,620sqm employment floorspace, 154 new homes, a new public ramp and separate step access to the Regents Canal towpath and high quality landscaping.

I support the proposals for the following reasons:

- The plans will regenerate the local area and provide jobs for local people.
- The employment space is focused on local start-ups and small businesses.
- The new housing, including on site affordable housing is much needed in this area.
- The new public ramp and step access to the Regents Canal towpath will be welcomed, as will the plans for improving public open space and linking this with the streetscape improvements currently being undertaken at 103 Camley Street.
- The development will contain a number of sustainable elements including photovoltaics, ground source heat pumps, combined heat and power, future proof connections for any future District Heating system, recycled rainwater, new trees and planting. In addition large areas of the site will be publically accessible.
