The drawing shows a facade with a grid of windows. The grid is 5 columns wide and 5 rows high. The windows are represented by rectangles with double borders. The roof level is indicated by a dashed line at the top of the grid, and the finished floor level (FFL) is indicated by a dashed line at the bottom of the grid.

St Pancras Way

This architectural drawing depicts a building facade characterized by a prominent grid pattern. The facade is composed of several vertical and horizontal sections. On the left side, there is a vertical strip with a grid of squares. The main body of the facade is divided into horizontal bands. The top band features a series of vertical lines. Below this, there are sections with various window and door openings. Some openings are simple rectangles, while others are more complex, with multiple panes or smaller rectangular elements. A central section has a large, multi-paned window. To the right of this, there is a section with a grid of squares. The bottom section of the facade is a solid, light-colored band. The overall style is minimalist and geometric, using black lines on a white background to define the building's structure and openings.
