

- Tree Protection Notes:**
Precautions to protect the condition and health of the root system should be carried out by:
1. Preventing physical damage to the root structure;
 2. Maintaining the soil structure by avoiding compaction , and
 3. Making provisions for water and oxygen to reach atthe root system.

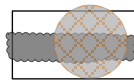

Netlon, orange plastic protective fencing shall be erected around all trees indicated on this drawing to help prevent damage through 'Works' in and around the site.
Where the RPA encroaches upon 'Works', every possible measure shall be taken to ensure minimum damage to root system by the following:

1. Pedestrian access shall be restricted to areas outside of the RPA. Barriers shall be installed to prevent unwanted access;
2. Vehicular access within RPA shall be prohibited at all times until practical completion;
3. Material that will contaminate the soil should not be discharged within 10M of the tree stem;
4. No fires where flames can extend within 5M of foliage/branches or tree trunk;
5. Fixing of notice boards should be via cables to any tree;
6. All excavations should be carried out by hand and avoiding damage to protective bark covering of larger roots;
7. Exposed roots should be wrapped in clean hessian to prevent desiccation;
8. Roots less than 25mm can only be pruned back to a side branch using proprietary cutting tools;
9. Roots larger than 25mm can only be removed after consultation with an arboriculturalist, and
- 10.Ensure any temporary/permanent surfacing in the RPA is sloped away from the tree to prevent waterlogging.

KEY

Existing buildings.

Existing vegetation and trees to be retained and protected during works on site.
