| 2014/6289/P | V Friderikos | Flat 7 Downing Court Grenville Street WC1N 1LX | 29/11/2014 20:16:31 | OBJ | <p>Here in the documentation it is seems that instead of 3 antennas there will be now 3 plus 6 remote radio heads so in total 9 antenna units. What are the transmission power of the new units and how this relates to the previous transmission powers? I would like to see RF exposure measurements at the vicinity of the installation. It is unacceptable to have increasing electromagnetic radiation. We do not even know where exactly the 6 radio heads will be placed. I would like to have some assurances about EM radiation and if these are within the FCC recommendation. I would like also a SIGNED paper from Vodafone that if upon installation the EMF levels are beyond what they should be (ICNIRP limits) they will remove antennas.</p> <p>http://ec.europa.eu/health/electromagnetic_fields/docs/emf_comparison_policies_en.pdf</p> <p>We need some further information - with what we have it is impossible to make any case regarding the proposal.</p> <p>Please this is a very serious issue which require attention.</p> |
