Following our return from a 6 week vacation in the USA we saw a skip had arrived next door No 73A. Also correspondence regarding planning. To reiterate our concerns that we sent into Camden in 2009.

- 1) Structural Damage to the foundations of our property
- 2) Distruption and noise while digging + construction.
- 3) While excavating so much soil and clay the air fills with dust that damages film and valuable sensitive video tapes in our studio. Also photographic archives and books. The basement at No 75 took one year, with a skip full of clay almost weekly. This caused ~~the~~ flooding during a week of heavy rain.
- 4) Flooding in the basement is a particular concern as we are at the lower end of the hill. Also run off from the railway embankment.

⑤ This increases rat activity, and is a health risk.
