Your Ref:

Dear sir/Madam,

Re: Application for an additional satellite dish atop 1 Stephen Street W1a 1AT

Please find attached the relevant documents and diagrams in support of our planning request with regard to the installation of a 3.7m satellite dish at our facility in 1 Stephen Street.

I would like to point out that this will only impact the roof area and no other tenants within the building. The Landlord's agents Derwent Central Cross Limited are already aware of the application proposal.

Encompass Digital Media Limited have been operating from this location for a number of years under this company name and earlier trading names; and use the existing satellite dishes on the roof to receive satellite signals for on-pass and production in support of our on-going business activities. We would now like to add an additional satellite transmit antenna to the existing dishes on the roof to help grow and develop our business.

The proposed location of the antenna on the roof top is such that it is unlikely to be visible from the street level and will not stand-out on the roof line from the existing satellite dishes that have been in operational use for some 10 years or so.

This is our first application of this sort so I hope we have included all the necessary documentation and diagrams required, but please do not hesitate to contact us if you have any further questions or information needs.

Yours faithfully

Neil Neusten | Encompass Digital Media
