2014/7593/P	Sandra Crisp	Flat 9 11 Dennington Park Road	17/12/2014 12:49:52	COMMNT	<p>I live at the stated dwelling and totally support the planning application. The current old, wooden sash windows in the main room are in a poor state of repair and badly leak heat - Making it very difficult to retain heat, resulting in high fuel bills and very bad condensation. There are 2 large full-length windows taking up about a third of the front-facade to compound the problem.</p> <p>The kitchen, built atop a narrow a roof , has leaky windows panes all along one side. The kitchen is therefore particularly cold as there is also no proper external wall, just a sandwich of thin hardboard. In the winter, the temperature is roughly the same as outside and very cold, there is no space for heating.</p>
