

**2.1.8 AMENDMENT 8: CPW**

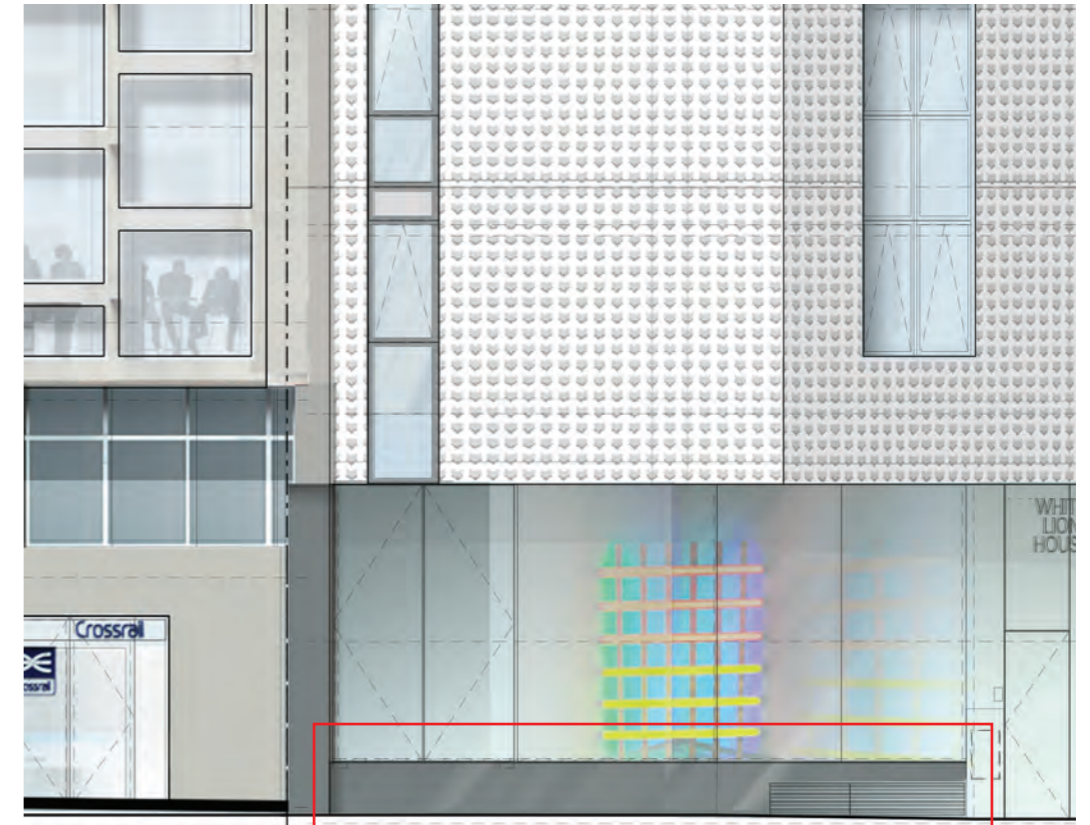

**Extended plinth and metal PPC lining to UKPN substation in lieu of louvre overcladding**

The area in question relates to the existing UKPN substation below CPW affordable housing. At the request of UKPN, it has been necessary to increase the existing plinth towards the North to provide a wider landing transfer space. This allows suitable access for the maintenance & replacement of their transformers.

Additionally, due to strict UKPN specification requirements it has not been possible to overclad the plinth face with new architectural louvres as previously intended as this would have a detrimental effect on the ventilation free area. It is therefore proposed to replace this with a new PPC metal cladding in lieu of the louvres and retain the existing louvre opening within. The metal lining will remain flush with the glazed facade above.
