2014/7587/P	Robert Deane	Globe Lawn Tennis Club 190a Haverstock Hill London NW3 2AL	05/01/2015 19:53:21	COMMEM AIL	The concern is for the future health of the Lombardy Poplar (T1 in the Arbouricultural Impact Assessment) which is on the Globe Tennis Club site. This is currently a healthy and attractive mature tree which enhances the neighbourhood for people and wildlife. It would be a loss to the area if this tree is damaged by basement excavations.
2014/7587/P	Markus Golser	29 Downside Crescent	06/01/2015 16:41:28	COMMNT	As a neighbour, I would need to understand whether it is proposed that the basement (to be built) extend beyond the existing footprint of the house. If this were to be the case, has an appropriate geological survey been undertaken, showing no risk of soil erosion or drainage issues?
2014/7587/P	Michael Yorke	31 Downside Crescent NW3 2AN	06/01/2015 14:15:27	INT	<p>This proposal will cause loss of garden/green space & drainage and rainwater disposal. The gardens downhill flood regularly due the concreting of nearby Globe Tennis Club courts. The wall at the bottom of the hill on Lawn Road was once knocked down by such flooding. This will make the problem of London clay movement even worse.</p> <p>The increased height of the development will reduce sunlight access and will overlook and reduce neighbours privacy.</p>
