

FALCO LEVEL

FALCOLEVEL (PRO)

The FalcoLevel and FalcoLevel-Pro are a multi storage cycle parking unit designed to house twice as many bicycles as any traditional cycle rack.

Designed for areas with restricted space, the FalcoLevel two tier cycle rack offers the ideal cycle parking solution for; stations, schools and shopping centres.

MULTI STORAGE | cycle parking

SUSTAINABLE | Recyclable Galvanised Steel

EXPANDABLE | Connect Multiple Units Side by Side

FALCOLEVEL

As the issue of encouraging more sustainable transport gathers pace, it's important that sufficient levels of cycle parking are available to support this requirement.

The FalcoLevel has been designed to be installed where floor space is at a premium, this can be most practical at busy transport hubs, such as train and bus stations where cycle parking facilities may be limited.

FALCOLEVEL & FALCOLEVEL-PRO

Both the Falco Level and FalcoLevel-Pro are the same size, use the same operations and accommodate all types of bicycles. The only difference between the two is that the FalcoLevel-Pro is equipped with a gas spring to ease the process of lifting.

Benefits

There are numerous benefits of the FalcoLevel compared to a traditional cycle rack, the key one being that the FalcoLevel can house twice as many bikes in the same area as any other cycle rack, the same capacity in half the square metres. All bikes can be securely locked to the FalcoLevel to maximise security and the FalcoLevel is very good value for money, ensuring a cost effective cycle parking station to meet all budgets.

Benefits of the FalcoLevel

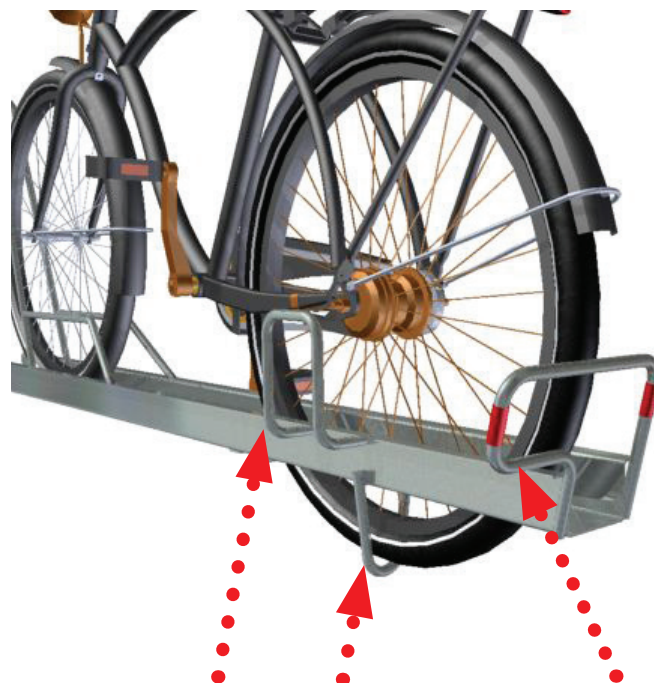

- Easy to pull out gutters with maintenance free runners.
- Upper tier universal gutter means no need for latches or moving parts.
- Each bike is held stable and secure in upper and lower parking tier.
- Additional locking point for wheel and frame.
- All bicycle types accommodated, from smaller tyres to chunky MB tyres.
- Modular and infinitely expandable, can be added to in the future.
- Handles feature durable reflective tape.
- Space savings with centre to centre distances of 375mm.
- Single and double sided versions.

- Additional support for lifting bikes on the higher tier available from the FalcoLevel-Pro
- A maintenance-free device, hot dip galvanised to BS EN ISO 1461.
- Optional powder coating in 192 RAL colours.
- A cost effective and highly durable cycle parking system to meet all applications.

Additional benefits of the FalcoLevel-PRO

- Equipped with a gas spring to ease the process of lifting.

Greater security for the cyclist

Multiple Locking Points

Application Areas

The great flexibility of the FalcoLevel enables it to meet all applications; whether you're planning to locate it indoors or outdoors; on the street, in a compound or a basement, the FalcoLevel is flexible enough to meet any requirement.

Canopies and Installations

Falco is Europe's leading cycle parking company and the FalcoLevel can be seen at a number of major transport hubs, in particular the Chelmsford Railway Station.

In addition Falco has a wide range of shelters and canopy products which are designed to cover the FalcoLevel cycle rack. Our website has some great design ideas.

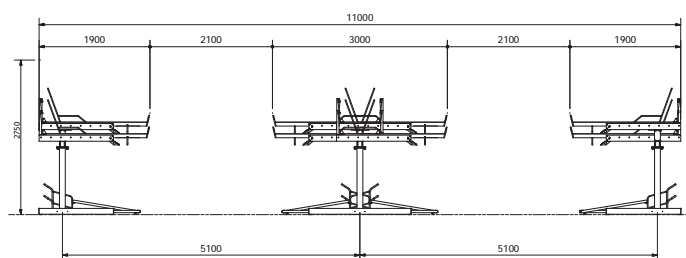

Colours

To provide additional protection as well as a decorative layer of colour, powder coating can be applied on top of the galvanised finish. Following galvanisation the whole product is polyester powder coated and the whole structure is then cured in a high temperature oven causing the powder to fuse to the zinc layer. The result is a uniform, durable, high quality and attractive finish.

Dimensions

The single sided unit has a depth of 1900mm parked position and 2100mm with the upper tray fully extended. The preferred ceiling height is 2750mm for maximum capacity, however this can be lower if required depending on the cycle height available.

The double-sided version has a depth of 3000mm parked position and 3400mm with both upper trays fully extended. The ceiling height requirement is the same as the single-sided version.

How the use FalcoLevel(-PRO), upper rack

1. Grab the handle from the gutter, with the reflective tape.
2. Then pull the tray towards you.
3. Lower the gutter until it rests on the support plate.
4. Lift the cycle into the recesses provided for the tyres and slide the bike onto the rack. In this way, the bike is correctly positioned in the gutter.
5. Push the cycle securely into the rack and use a cycle lock if required.
6. Lift and slide the tray into the rack.
7. Ensure the tray is pushed fully home until it sits on the catch.
8. The bike is parked in solid and stable manner.

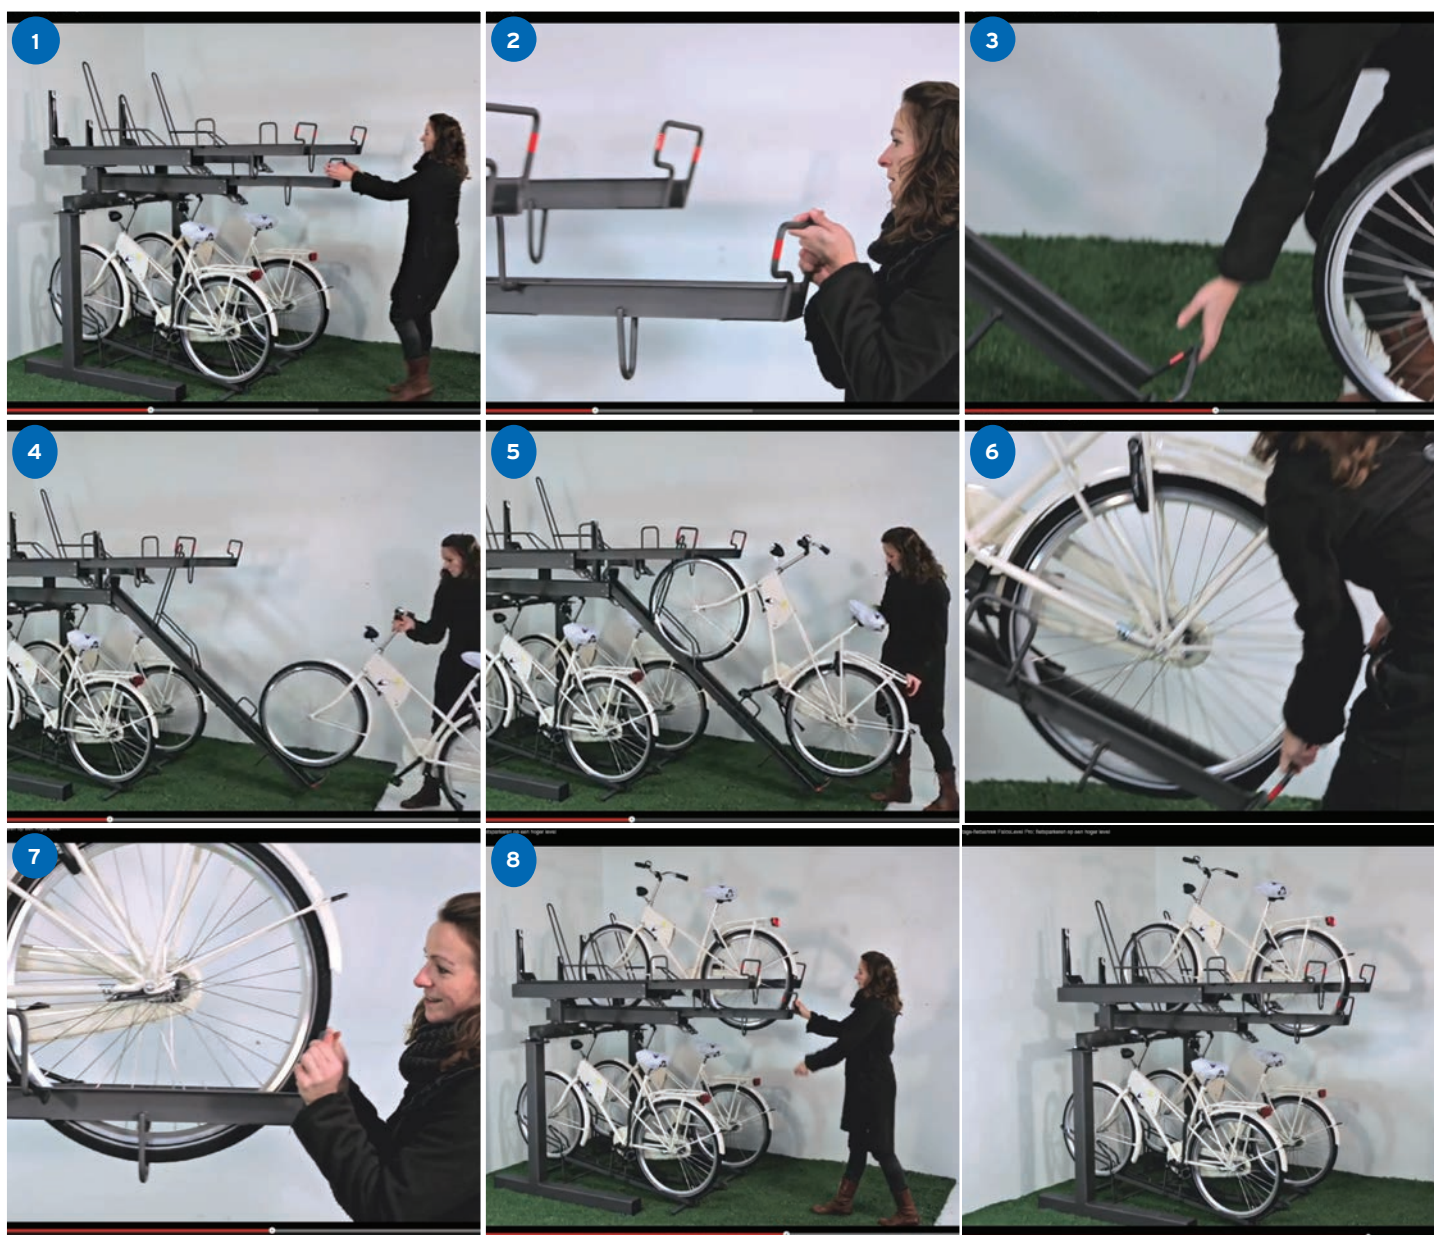

Then unloading your bike simply works the opposite way!

The lower rack has a sloping wheel channel, so the user does not have to bend between the levels
