2015/0485/P	G Pattison	Flat 2 20 Prince Albert Road London NW1 7ST	25/02/2015 18:58:21	COMMNT	We are extremely concerned about our likely loss of privacy caused by the large proposed box window on the first floor south elevation. It faces directly into our bedroom and toilet windows. When 20 Albert Terrace Mews was originally built, permission was granted for the current, smaller windows presumably for this very reason -- to protect the privacy of the house opposite. So why would the council now allow a new window to be installed, nearly five times as large? The planning application as submitted states 'Obscure glazing'. We assume this means a minimum of Level 5 obscurity, but it does not say this specifically on the submitted application as far as we can see. Our strong preference is for the original window design to be kept, as it was done for a good reason at the time, which remains totally valid today.
2015/0485/P	Bella Bird	Flat 1 20 Prince Albert Road London NW1 7ST	25/02/2015 19:25:42	COMMNT	I am very dismayed to see the plans include a big box window to the south side which will look directly into my garden, and potentially into my bathroom and bedroom too. I feel this will greatly impinge on my family's privacy. How 'obscure' will this glazing be? There is so-called 'obscure' glazing, like Pilkington Obscure Glass Level 1, which is not obscure at all. Please can you advise exactly what glazing would be used in this big window if it is given planning permission.
