Dear Mr. Obote,

You may be aware that Redington Frogna Association has been asked by Camden to update its Conservation Area appraisal for the Redington Frogna Conservation Area.

I thought you might like to read some of the comments made by Rob Lloyd-Sweet of the Conservation Studio / English Heritage in respect of 389 Heath Drive. He described the house on the corner of Finchley Road and Heath Drive as,

"A classic early 20th century large house and large garden, designed to appeal to middle class commuters. The red brick is well represented, with stone detailing. There are large trees in the garden visible from the street. Both the house and garden form a positive contribution to the Conservation Area."

We trust that this will continue to be the case and that Camden will not permit the destruction of the setting of this house, or the house itself.

Kind regards,

Nancy Mayo

Redington Frogna Association

Subject: 38 Heath Drive, 2015/0335/P - OBJECTION

Dear Mr. Hope,

Further to the objection below, Redfrog would like to express concern at the further certain destruction of bat foraging habitat, if Camden permits the removal of Landscaping Condition 8.

The area, which is on a bat flight path, has already lost a number of mature trees and can not afford any further losses.

We reiterate our insistence that Condition 8 remains in place in order to guarantee that no trees are felled and that the front, rear and side gardens are retained in their entirety as soft surface.

Kind regards,

Nancy Mayo
