2015/1274/P	Judith Sayers	Flat 51 Winter Garden House Macklin Street	03/04/2015 13:34:47	COMNOT	Dear Sirs, I have reviewed the attached documetation and acoustic report and have the following comments; As a full time resident leaseholder of the 11th floor floor east facing flat I currently experience considerable noise disturbance from the 11 number existing roof mounted air handling outlets sited on the 9th floor roof of the New London Theatre. These 11 existing intake / extracts outlets whine and squeal when in operation, which creates significant noise disturbance particularly with my windows being open during the summer months. My concern is that the additional untis proposed (albeit on the lower roof level) will contribute further to this disturbance, in particular the high level flue outlets proposed at 9th floor level at the upper extent of the proposed acoustic enclosure. Clause 18 of my lease states 'generally not to do or permit anything which shall be or tend to be a nuisance, annoyance or cause of damage to the Lessor or to any neighbouring adjacent or adjoining property".
