Nest Aids for Buildings

Bat Tube 1FR

[Pic. 1]: 1FR installed

This Tube system meets the characteristic behavioural requirements of the types of bats that inhabit buildings. The design maintains excellent climatic conditions inside the Tube allowing the animals to either hang onto the wooden rear or onto the wood-concrete front. It requires no maintenance because droppings fall out of the entrance ramp.

Installation: Can be installed on external walls – either flush or beneath a rendered surface in concrete and, during renovation work, under wooden paneling or in building cavities (e.g., slab-type building structures, bridges, etc). If required, it can be painted using standard air-permeable exterior paint. Birds will not occupy this box. To allow access into existing cavities in buildings, use the 2FR model below.

Nest Aids for Buildings

Sparrow Terrace 1SP

Triple Nesting Aid

[Pic. 1]: Sparrow Terrace 1SP

While nesting and raising their young both types of sparrow feed exclusively on insects, especially arthropods (insects with segmented legs).

Therefore, their traditional role in keeping down pests and maintaining the balance of nature is a very important one, though not always recognised.

Recently the numbers of both species have declined substantially and in some areas they are now rarely seen. Long term studies have confirmed this drastic reduction in their numbers across Europe.
