Application 2015/1168/P

18th April '15

Dear Sir,

I wish to comment on the planning application for works to be carried out at 37 Rudall Crescent + 39 Rudall Crescent NW3 1RT. I note that this application now includes double glazed doors + windows to first floor + rear elevations, which was not mentioned in the previous letter of 12th March. What will come next?

I am against the proposal to install 'roof lights to the rear roof pitch'. These lights will

obviously come on during the hours of darkness, & as such will shine down into the room at the back of my house, & my next door neighbours. I am particularly worried about my son, whose bedroom is at the back of my house facing Radall Crescent, & may have bright lights shining into his window at night, making it hard for him to sleep & disturbing his sleep pattern. Also, as Autumn approaches & it starts to get dark earlier in the afternoon, I am worried that these lights will come on & ~~start~~ shine directly into my living room at the back of my

house, making me feel illuminated against my will.

As far as I know, no-one else on that side of Rhodall Crescent has such lights; we have never any in the many years I've lived here.

Apparently, the Light + Neighbourhood + Environment Act says something to the effect that lights from someone's property must not shine directly onto a neighbour's property.

I do hope you will reject this part of the Application.

yours faithfully

Your comments

I object to the application because the proposed roof lights would be very bright shining onto my bedroom which is at the back of our house facing Randall Crescent. Would these lights be on for only a few hours or all night? Either way it would probably keep me awake even with my curtains and make for a bad night and bad day.

I hope you will turn down this particular ~~propos~~
proposal.
