

NOTES

Planting schedule on drawing 358/1002

In addition to plants shown on the drawing and the schedule it would be prudent also to include 1 No Garrya Elliptica 'James Roof' (5l pot) and 3 No Eleagnus x ebbingei (3l pots) for planting subject to roots at the rear of the garden. Currently two young self seeded sycamores are to be retained but we think that these may become troublesome in time in terms of size and because they seed so freely - our recommendation, therefore is that these trees are removed, the roots ground out and an Albezzia julibrissin - A Persian Silk tree is planted in their place - this is smaller and less shady for neighbours and more attractive generally.
