

I would like to remove two trees of heaven situated at 186 Goldhurst Terrace. These trees are in a good condition however my customer has a very small garden and has already a large ash tree there. These trees are situated under ash tree and therefore are diminished by larger tree.

To get some light trees of heaven are deviating from the vertical.

In my opinion these trees does not present any aesthetic and functional values.

Leaving these trees will lead to continuous deviating from the vertical and could lead to breaking them in a future.

Removal of them will not be a large loss for the environmental.

I am enclosing a picture of these trees of heaven for you to look at:
