

## **Easy Clean Sash Windows (Secondary Glazing)**

City Sound is the only company that can offer the “EASY CLEAN” sash windows. We redeveloped the system in 2012 (in house) and what this has done is solved the very serious problem of cleaning.

With normal secondary sash windows (that you will be offered from other companies) there will be a 9 inch band you can never get to for cleaning. This band will be right on the site line of the windows and over a period of time will look awful. Our new Easy Clean Sash windows eradicate this issue by simply allowing the two sash panels to extend past each other (in the opposite direction) – meaning you can get to all areas of the glass.

Another point to raise is our very own (again exclusive) transom bar (where the 2 sliding panels meet in the centre). This was redesigned late last year to have a more attractive look and finish.

With the easy clean handle (that is actually recessed) and this new transom bar, it gives the windows a very “finished and polished” look and this is not something you will get from other companies.

So if you are concerned with aesthetics, performance AND functionality, then I think you should really consider our unique product.
