## introduction

0.1 nicolas tye architects portfolio overview

### Introduction

We are a young vibrant award winning practice interested in creating innovative, high quality, healthy environments for all people. We work predominantly within the residential sector and are currently running some 60 residential projects across the country. Central to our philosophy is that design is generated by the needs of people and the framework of the local context, regardless of the size or scale of the design opportunity. We actively encourage our clients to consider sustainable and sympathetic interpretations of the existing context to the benefit of the local environment. Our experience is far reaching and our philosophy is successfully applied to projects large and small.

### The Long Barn & Long Barn Studio

A derelict barn dating back from 1860 and used for the last 150 years as a grain store has now been converted into a 4 bedroom family house with Studio annex. Sensitivity to the locality and to the existing framework of the building formed a delicate brief between new architecture and old.

A new building was slid into the extrusion of the existing space, respecting the frame and roof of the original barn. A vast fully glazed gable end with a panoramic view of the local countryside forms the end point of a journey through an open plan 250m<sup>2</sup> ground floor space. Natural and organic materials were used wherever possible. The studio's building strategy is based on an elegant rectangle. Accommodation comprises of a reception and seating area for clients, a kitchen, storage, studio space, WC's, meeting rooms and a library and services pod - a continuous expanse of space defined by volumes of Wenge pods containing the ancillary elements of the programme.

### Awards

Build It Award for Berkhamstead house- Best use of SIPS - 2013  
AVDC design awards 2012 - winner of the plaque for outstanding design  
International Design and Architecture Awards 2011- Shortlisted in the Residential £2.5 - £5.5 million category

## introduction

0.3 client brief and design and access statement

### client brief to architect

- Refurbish the existing buildings to convert them into self contained flats.
- Integral facade renovation and partial rear extensions to level up the fragmented volumes at the current landing levels.
- Create new light wells to the basements from the the pavement facing Malden Road.
- Add a recessed mansard roof to both properties.

### design and access statement

#### site

The site comprises two properties in the London Borough of Camden. Numbers 119 and 121 are next to each other in Malden Road, a very popular area in Kentish Town among students and young professionals.

#### existing use of the properties

119 Malden Road is divided into two flats and 121 Malden Road is a licensed house in multiple occupancy (HMO) providing 8no bedsits. Both houses require significant improvements to upgrade both the fabric of the Victorian properties and also the living conditions provided for the residents. The license for HMO from London Borough of Camden (ref: 8331A) dated 7 October 14 states that 4 people maximum should occupy 121 Malden Road in its dilapidated current condition.

On this basis, we understand from the response to a pre-application enquiry to London Borough of Camden (reference: 2015/1698/PRE) on 22nd June 2015, that if the maximum number of permitted occupants allowed under the licensing regulations is between 3-6 people, the property is classed as a C4 Use Class and this application would require a change to a self contained C3 Use class under permitted development rights, which is to be considered as part of this application.

#### proposal

Both houses in numbers 119 and 121 are rented properties in substantial need of renovation.

Our client would like to refurbish them completely to convert them into self contained flats. The same type of project has been carried out through to completion in number 127 of the same street. Pictures of this example can be found in section 2 of this document.

#### scale

Following to the pre-application advice, the renovation project results in a mix of units where 40% of the total are two bedroom apartments.

121 Malden Road will house a 3 bedroom apartment on the ground floor and basement, a single bedroom apartment on the first floor and a two bedroom apartment on the second floor and within the proposed mansard roof.

119 Malden Road will house a 2 bedroom apartment on the ground floor and basement, a single bedroom apartment on the first floor and a two bedroom apartment on the second floor and within the proposed mansard roof.

In conclusion, both properties will provide 6 self contained units in total: 2no 1 bedroom flats, 3no 2 bedroom flats and 1no 3 bedroom flat.

The proposed recessed mansard roofs have been added to the project taking the renovation of number 127 Malden Road as a precedent and respecting the existing valley roofs to the rear of the property.

In order to improve the space within the first floor apartment, a small rear extension has been proposed in number 121 above the roof of the existing external toilet volume at the intermediate landing level.

#### appearance

The renovation aims to preserve the character and appearance of the area. Therefore, the facades will be cleaned and repointed to let the existing brick exposed while the windows will be replaced to match the victorian style of the surrounding houses, such as that in number 123.

#### waste storage and collection

At present all waste disposal is put outside the houses for collection every Wednesday. Due to the nature of the street, there is no way to house the bins discreetly without front gardens on the victorian terrace. Therefore, we assume that the current system will continue after the renovation.

#### advice focus

We sought pre-application advice in late March in order to test to what extent the original proposal was likely to be accepted, specially as to the number of 1 bedroom units, the renovation of the rear facade and the inclusion of balconies, the additional mansard level, the small rear extension proposed in number 121 and the new front access to the basement.

#### pre-application advice

Advice was received to estate that there was an overreliance on 1 bedroom units, that a 3 bedroom apartment was required and that 40% of the units needed to be 2 bedroom units. The advice also pointed at overlooking issues at the rear of the properties and the loss of the rear valley roofs which would not be acceptable, although a mansard roof is to be accepted as per number 127.

As a consequence, we have stepped backwards to a more restrained renovation project, focusing in improving the existing buildings and omitting all the additional elements such as the rear balconies and extensions and the new access to the basements from the front pavement.

The new mix of units provides a greater choice for different professional profiles, students or families in Camden.
