

# SkyView

## SkyView - Fixed Flat Roof Skylight

Sunsquare's most definitive skylight, combining outstanding thermal performance with sleek aesthetic appeal. The SkyView is a traditional fixed flat roof skylight that offers a classic solution to improving natural light levels into living spaces.

Each SkyView skylight can be supplied with a custom manufactured fully insulated 75mm thick upstand, for ease of installation. Available made to order in a huge selection of sizes, with single pane models up to 4m<sup>2</sup> and multipane models in widths of up to 2.4m and infinite lengths. Wall abutment of the SkyView is possible on up to three sides, as is the possibility of bespoke shapes.

High Specification Flat Roof Skylights

## Sunsquare and BSI ... “Working together for a better future”

Sunsquare have been working in partnership, since 2012, with the BSI, the world's leading authority for product testing and quality assurance, to heighten the standards for consumers looking to purchase from the skylight industry.

Sunsquare believe in offering the best possible quality combined with the best possible service and appreciate that this is not a finite goal, rather a continual process of improvement. With this belief in mind they contacted the BSI to request that they put all of the products the company produces through the most rigorous testing cycle possible... BSI were only too pleased to assist.

A testing protocol has since been developed in partnership with the BSI's specialist glazing team and Sunsquare's own Technical Director, James Boughton, that mimics real life scenarios that you could expect your skylight to be put through in the real world.

The tests completed check the skylights ability to withstand cyclone winds, hard driven rain, air permeability and structural integrity. Sunsquare are pleased to confirm that not only did all of their products pass these tests, they exceeded them.

To reassure clients of the quality of the products that they can specify from Sunsquare the tests are fully audited and will be undertaken with each and every new product the company brings to market.

Sunsquare Technical Director, James Boughton, said, “We are delighted to have created such a valuable relationship with the BSI, a recognisable mark of quality not just in the UK but around the globe. Achieving such results in these laboratory tests sets out a new benchmark for skylights, as testing to such extremes is a real mark of design quality.”

## Sunsquare ... “Believing in Better”
