

Shorts Gardens – Security System

Ref: 15-088

Document No. S(00)06

15 July 2015

Security Camera System

A discrete wall mounted camera security system will be installed by a specialist. This is to help alleviate any safety issues for access and exit within the building, as well as in the interest of surrounding neighbors, and pedestrians walking around the site. The CCTV security footage and data will be managed by the occupiers of the building and the maintenance team. All footage will be checked on a regular basis, be fit for purpose and be in keeping with the latest regulations and Data Protection Act.

The design of the security system will be discrete with least visibility to affect the appearance of the facade as well as in keeping with security systems in surrounding properties.

The camera style will be a contemporary dome camera, image below as reference -
