GARDEN AMENTITY
BIODIVERSITY & CHARACTER

EXISTING.

As demonstrated in the photos of the existing site; the area for the proposed extension is currently an un-attended to space which is predominately paved over. The space also feels disconnected to the rest of the garden space due to being sunken down and narrow aperture as you turn the corner.

PROPOSED.

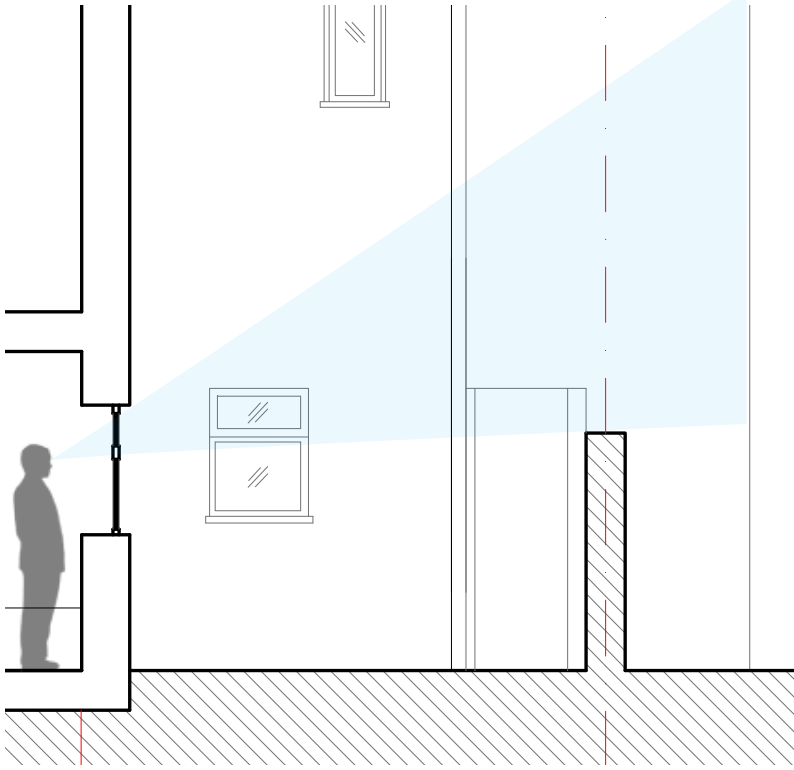

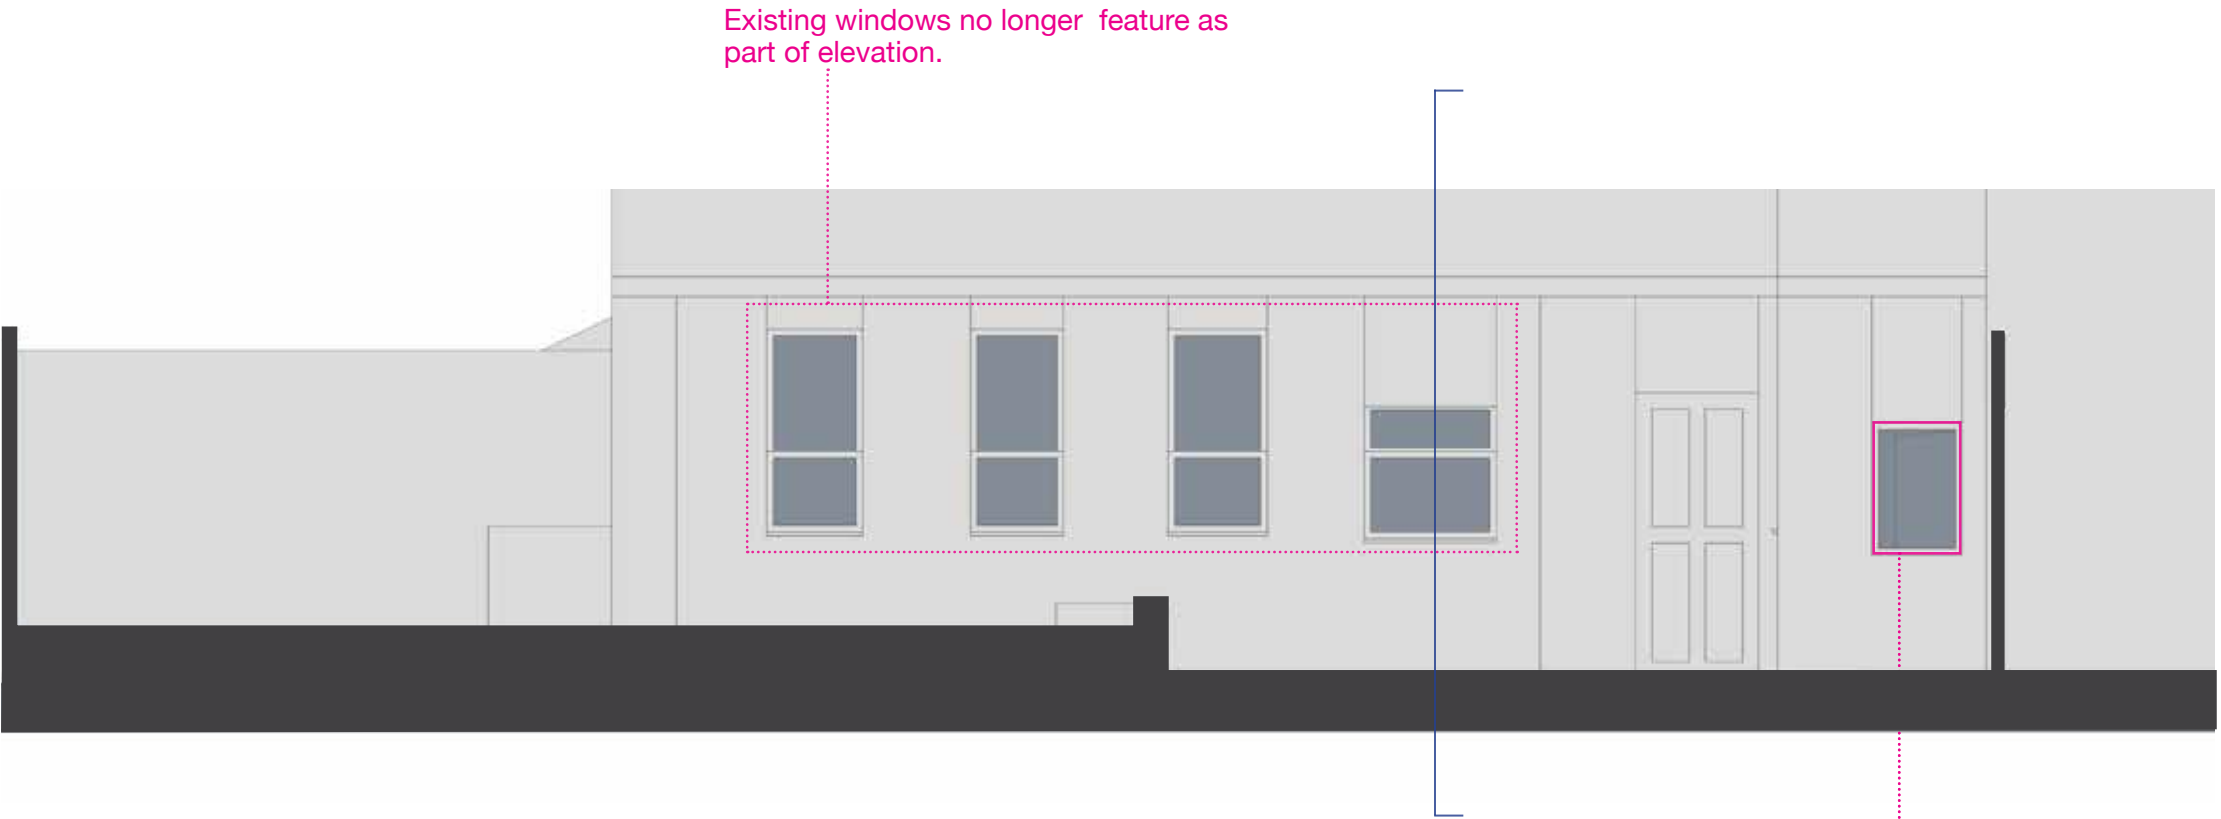

With the proposed extension, we are looking to add to the biodiversity and quality of external space by introducing a sedum roof, which will provide a space for wildlife to flourish. As well as having environmental advantages, the proposal will also create a more appealing view to floors above. By filling this currently negelected space, we hope to blur the boundary between outside and inside spaces, integrating the garden into the overall living experience of this home.
