2015/4890/T	Nancy Mayo	12A Hollycroft Avenue	29/08/2015 23:16:05	OBJ	<p>Goat willows are of particular importance to biodiversity and should be retained wherever possible. Because its flowers are amongst the earliest to appear, it provides a valuable food source for foraging bees and is also a major nectar source for early insects, especially moths. We should appreciate it if this important tree could be retained.</p> <p>Nancy Mayo Secretary Redington Froggnal Association</p>
