2015/3004/P	H Zimmerman	18 Lindfield Gardens Flat 5 London NW3 6PT	03/09/2015 09:54:07	OBJ	Several aspects of this proposed development are alarming in their own right and as precedents. In particular, the depth of the basement, the moving forward of the base building footprint and potential damage to the trees should be opposed. While I acce here is likely (if it does not violate sightlines), we should not be permitting extensive green spaces of the area, nor should we permit compromises to the ground stability buildings in the area depend. As noted in another comment, the construction method farce and has evidently been copied and pasted from a prior document and not approfor the tight circumstances of this building. Development of the site is unavoidable abut needs to be appropriate and measured, which is not the case with the current price of the site is unavoidable.	ment outside of the pt a taller building a taller building a damage to the apon which all a statement is a opriately tailored and understandable.	g
