2015/4256/P	Sam J Manley	5 Perceval Avenue NW3 4PY NW3 4PY NW3 4PY	05/09/2015 14:28:32	OBJ	First and foremost our objection is on the basis that air conditioning units are completely un-necessary. I don't know if the intended occupants have ever lived through a British summer but they will need central heating more than air conditioning. The usual objection that it will alter the appearance and integrity of the area and surrounding properties. If they want air con it must be internal and not be seen.
2015/4256/P	richard midda	3 perceval avenue	03/09/2015 10:38:41	AMEND	Further to my recent comments, I should add that the air con will be working at night in the summer, when we need all the windows open for ventilation and the noise will be most disruptive, if the condensers are left in the proposed position.
2015/4256/P	Richard Midda	3 Perceval avenue Nw3 4 py	05/09/2015 22:07:22	COMMNT	The house at 251 Haverstock Hill , which corners Belsize lane and is approx 50/100 feet away from 1 Belsize Lane has had its air conditioning condensers placed on the Belsize Lane frontage , away from its neighbours .it would be appreciated if the condensers of I Belsize lane could be placed in a similar position on the main road where the noise would evaporate into the street.
2015/4256/P	richard midda	3 perceval avenue NW3 4PY	01/09/2015 12:27:38	COMMNT	I reside at 3 perceval avenue. There are 4 condenser units only 7 ft (approx) from my wall. There are two windows along this wall which belong to our en suite bathroom.This is an extension of a habitable room. I feel that the noise created will be most unpleasant and would prefer the condenser units to be placed on the ground floor facing Perceval Ave, or elsewhere, where the sound could be more easily absorbed.
