Application for tree works: works to trees subject to a tree preservation order (TPO) and/or notification of proposed works to trees in a conservation area.

# Town and Country Planning Act 1990

## Publication of planning applications on planning authority websites

Please note that with the exception of applicant contact details, the information provided on this application form and in supporting documents may be published on the authority's website.

If you have provided any other information as part of your application which falls within the definition of personal data under the Data Protection Act which you do not wish to be published on the authority's website, please contact the authority's planning department.

Please complete using block capitals and black ink.

You must use this form if you are applying for work to trees protected by a tree preservation order (TPO). (You may also use it to give notice of works to trees in a conservation area).

It is important that you read the accompanying guidance notes before filling in the form. Without the correct information, your application / notice cannot proceed.

# **Arboricultural Report**

#### 1.Instructions

- 1.1 I have been instructed by Mrs. Powell (Head Gardener) on behalf of The Crown Estates Paving Commission to survey all trees they have a responsibility for as a result of concerns they have regarding their condition and safety. As a part of the survey I highlighted a tree at Cumberland Terrace that is in a poor condition. I suggested carrying out an inspection from ground level to include the following:
  - a. Health and safety and overall condition of the tree.
  - b. Make recommendations regarding any future management needs.

### 2. Report Limitations

- 2.1 The inspection has been carried out from ground level only as this is a preliminary report. Further investigation may be required with climbing access to the tree or decay detection.
- 2.2 The inspection was carried out with the aid of binoculars using visual observation methods, a sounding mallet, a metal probe, and a ladder for access. Should a more detailed inspection be required then this will be highlighted in the recommendations.
- 2.3 Trees are living organisms whose condition can change rapidly, the health, condition and safety of trees should be checked on a regular basis, preferably at least once a year. The conclusions and recommendations in this report are only valid for a period of one year. This period of validity may be reduced in case of any change in conditions to or in proximity to the tree.
- 2.4 The tree in question may be covered by a Tree Preservation Order (TPO) or is in a Conservation Area. If so, before undertaking any works to the tree it would be necessary to obtain consent from the Local Planning Authority.

# 3. Introduction

- 3.1 I visited the site on Friday 25th of September 2015 to conduct the survey to conduct a further inspection. Please a find a copy of the site plan in the appendix. Trees numbers referred to in this report correspond.
- 3.2 I confirm the tree species of T20 is an Indian Chestnut Aesculus indica. It is located within Cumberland terrace communal gardens, a portion of all the crowns overhang a public highway and is 1m from the pedestrian path.. The tree is a mature specimen of average form for the species.
- 3.3 The trunk diameter is approximately 60cm at 1.5m. It stands at approximately 14m. The average crown spread are is 3-4m.

2

### 4. Findings

### **T20**

#### 4.1 Leaves, buds and extension growth.

The trees vigour is normal for the trees age and species.

### 4.2 Trunk and Branch Structure.

- 1. The branch structure is balanced, symmetric and wide but consistent with this species. Pruning wounds from past works are apparent throughout the crown, which have subsequently turned to cavities and pockets of decay.
- 2. The trunk has a 15cm x 2cm vertical cavity South side at the base with dry boring insect exudations present, decay extends 10cm deep with a probe. Several cankers are located on the trunk and scaffolds which are consistent for the species. Longditudinal fissures with woundwood are present at 3m West side with more resent fissures without wound wood. A cavity 25cm x15cm is present on the North East side at 4m with poor wound wood formation and a 50cm canker below. Fibre buckling North East side above the cavity is apparent with reactive concertina stress rippling (opposite) South West side for 2m.

### 4.3 Root System

1. At the time of inspection no evidence would lead me to believe that the rhizosphere (rooting area) is in any way disturbed, however the main services access is 1m from the trunk and regular vehicle movement will have compacted the path and soil.

Note: At the time of inspection no fungal brackets were present

# 5. Conclusions

- 5.1 The overall health and vigour of the tree following external visual inspection would appear to be average. However, as with a mature tree of this species there are several structural faults. The most significant being the Cavity on the trunk at 4m North East side with no wound wood formation. Without needing further investigation the stress buckling and fissures indicate excessive movement above the cavity.
- 5.2 This is an unnecessarily high risk with regards to the high hazards presented by the public highway, open access and residence parking. Also under the Occupiers Liability Act. 1984 the land owner or resident has a 'duty of care' to keep the tree in a reasonably safe condition for any persons on the land including trespassers. Due to the nature of growth and subsequent lack of defence mechanisms, T20 has passed the point of structural decline and is now at the point of potential failure and succession. Remedial crown reduction works to alleviate wind loading would detract from the trees amenity value and further reduce the trees vitality and ability to form supporting wound wood.

# 6. Recommendations

- 6.1 Fell T20 to ground level immediately.
- 6.2 All tree works are to be carried out to British Standard 3998 (1989); Recommendations for tree work, by a qualified Arborist.

This report is for the sole use of the above named client and refers to only the tree identified within, use by any other person(s) in attempting to apply its contents for any other purpose renders the report invalid.
