Re : 2015/5644/P 9 Belsize Square

We were unable to file out comment via the "add comments here" page since on submission your receiving server sent out the message shown at the bottom of this email, which has happened a number of times.

Nor was the planning application notified to us via the E-Notification system.

Nevertheless we would like to submit our response to this application as follows:

OBJECT

Object to the design of the proposed newe dormeer, it's pitched roof, it's excessively thick surrounds and it's fenestration sub-division which are all out of character with the existding architecture.

Eldred Evans
Chair
Belsize Conservation Area Advisory Committee

....unquote

What now follows is the url page which comes back to us whenever we try and use the "add comments here" option:

Server Error in '/Northgate/PlanningExplorer17' Application.

Runtime Error

Description: An application error occurred on the server. The current custom error settings for this application prevent the details of the application error from being viewed remotely (for security reasons). It could, however, be viewed by browsers running on the local server machine.

Details: To enable the details of this specific error message to be viewable on remote machines, please create a <customErrors> tag within a "web.config" configuration file located in the root directory of the current web application. This <customErrors> tag should then have its "mode" attribute set to "Off".

<!-- Web.Config Configuration File -->

<configuration>
  <system.web>

```
        <customErrors mode="Off"/>
    </system.web>
</configuration>
```

Notes: The current error page you are seeing can be replaced by a custom error page by modifying the "defaultRedirect" attribute of the application's <customErrors> configuration tag to point to a custom error page URL.

```
<!-- Web.Config Configuration File -->

<configuration>
    <system.web>
        <customErrors mode="RemoteOnly" defaultRedirect="mycustompage.htm"/>
    </system.web>
</configuration>
```
